- Boron Influences calcium and magnesium metabolism.*
- Complements Nikken OsteoDenx® In combination, offers a program for maintaining healthy bones.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

THE FACTS

- Nikken CalDenx® and Nikken OsteoDenx® offer a practical program to help support healthy bones and joints, as complementary formulations. Dr. A. S. Naidu developed these two products to work together, with OsteoDenx to support a natural increase in bone density, and CalDenx to provide the calcium and other minerals necessary for this process.*
- CalDenx supports the natural process of bone tissue replacement throughout every stage of life.
- CalDenx offers impressive amounts of the mineral compounds recognized as supporting bone and joint health. Its 900 milligrams of calcium equals 90% of the U.S. Daily Value.
- The United States Department of Agriculture reports that three-quarters of the American population do not have enough magnesium in their diets. The magnesium in CalDenx is equivalent to 56% of the U.S. Daily Value. Magnesium aids the body in metabolizing calcium and helps bind it to tooth enamel.*
- In addition, the levels of Vitamin D (225% of Daily Value), Vitamin K, boron, folate and chromium further support bone mineralization and mineral metabolism.*
- Many conventional calcium supplements are often bulky or chalky and thus difficult for many to tolerate. CalDenx is provided in convenient tablet form.

Supplement Facts / Datos de Suplemento		
Serving Size / Tamaño por Ración: 3 Tablets / Tabletas		
Servings Per Container / Raciones por Envase: 30		
Amount Per Serving / Cantidad por porción	% Daily Value / % Valor Diario
